

AXIBASE FABRICA

KEY CAPABILITIES

- Real-time business process, IT service and application views
- Cross-browser Web 2.0 user interface built with AJAX and SVG
- Import of views and service models from Microsoft Visio diagrams
- Out-of-the-box integration with Microsoft Operations Manager
- Impact analysis, availability reporting and launch-in-context tools

KEY BENEFITS

- Accelerates diagnostics and recovery in complex failure scenarios
- Provides service-oriented visibility into hardware and software assets
- Delivers role-based views for business managers and executives
- Builds consolidated views for heterogeneous environments
- Leverages existing Microsoft Visio diagrams for fast rollout

TOOLS & MODULES

- Service dashboard
- Nested views
- Topology explorer
- Cross-layer impact manager
- Availability reporting
- Real-time alert console

AXIBASE FABRICA

Axibase Fabrica is an easy-to-use visualization solution for monitoring IT infrastructures from a service and business process perspective. By creating real-time graphical representations of a managed environment based on Microsoft Visio diagrams, Fabrica provides IT and business managers with a new way to visualize business impact, identify emerging fault patterns and resolve complex problems faster.

Fabrica includes pre-integrated adapters for Microsoft Operations Manager as well as other leading systems and network management tools for enterprise-wide visualization.
